PEMROGRAMAN MOBILE

1. Buat program Dart sederhana yang menggunakan kombinasi percabangan dan perulangan untuk menyelesaikan masalah. Contoh: program untuk menghitung faktorial, cek bilangan prima, atau game tebak angka;

```dart
import 'dart:io';

void main() {
  List<int> riwayat = [];
  String lanjut = 'y';

  while (lanjut.toLowerCase() == 'y') {
    stdout.write("Masukkan sebuah angka: ");
    int angka = int.parse(stdin.readLineSync()!);

    bool prima = true;

    if (angka <= 1) {
      prima = false;
    } else {
      for (int i = 2; i <= angka ~/ 2; i++) {
        if (angka % i == 0) {
          prima = false;
          break;
        }
      }
    }

    if (prima) {
      print("$angka adalah bilangan PRIMA");
    } else {
      print("$angka bukan bilangan PRIMA");
    }

    riwayat.add(angka);

    stdout.write("Cek angka lagi? (y/n): ");
    lanjut = stdin.readLineSync()!;
  }

  print("\nRiwayat angka yang dicek:");
  for (int angka in riwayat) {
    print("- $angka");
  }
}
```

```
PS C:\KULIAH\MATKUL_SEMESTER 4\PEMROGRAMAN
Masukkan sebuah angka: 1
1 bukan bilangan PRIMA
Cek angka lagi? (y/n): y
Masukkan sebuah angka: 3
3 adalah bilangan PRIMA
Cek angka lagi? (y/n): y
Masukkan sebuah angka: 10
10 bukan bilangan PRIMA
Cek angka lagi? (y/n): n

Riwayat angka yang dicek:
- 1
- 3
- 10
```

2. Buat repository GitHub untuk program tersebut dengan minimal 3 branch dan 5 commit yang menunjukkan perkembangan fitur.
   a. Buat repository

   b. 3 Branch dan 5 commit

      1.1 Branch pertama

```
